Test Plan – PHPTravels Demo

Project Type: Web Application Testing
Testing Type: Manual Testing
Testing Duration: 7 Days
Team Size: 5 Members
Documentation Tool: Google Sheets
Application Under Test: PHPTravels Demo
Document Version: 1.0

---

1. Test Objectives

The main objective of this testing project is to evaluate the functionality and usability of the PHPTravels Demo application across its available user roles.

The testing team aims to:

- Verify that the main functionalities available to each user role work as expected.
- Validate user interactions and business workflows.
- Identify, document, and report defects.
- Verify that data is handled correctly across different user roles.
- Test important end-to-end workflows, such as a customer creating a booking and an administrator viewing or managing it.
- Provide a clear summary of the application's quality based on the executed test cases.

The testing activities will focus on functional testing within the available demo environment.

2. Test Approach

The project will follow a manual, risk-based testing approach.

The testing process will include:

2.1 Manual Functional Testing

- Verify the main functionalities of each available user role.
- Execute positive test scenarios to validate expected behavior.
- Execute negative test scenarios to check how the system handles invalid inputs and unexpected user actions.

- Validate business rules and workflows.

2.2 Exploratory Testing

- Explore the application to understand its features and user workflows.
- Identify potential issues that may not be covered by initially designed test cases.
- Document unexpected behaviors and observations.

2.3 End-to-End Testing

- Verify workflows involving multiple user roles.
- Validate interactions between Customer and Admin where applicable.
- Verify that actions performed by one role are reflected correctly in another role.

2.4 Defect Management

- Report reproducible defects with clear steps.
- Include expected and actual results.
- Attach screenshots or other relevant evidence.
- Assign severity and priority to identified defects.

Testing Techniques:

- Equivalence Partitioning.
- Boundary Value Analysis.
- Error Guessing.
- Experience-Based Testing.

These techniques will be applied where relevant to the available functionality.

Note: Automation, API Testing, Performance Testing, and Security Testing are not included in the current testing phase.

3. Test Scope

The testing scope will cover the four main user roles, subject to their availability and accessibility in the provided demo environment.

3.1 In Scope

Customer Role

- Registration and Login.

- Logout and account-related functionality.
- Profile management.
- Available booking services.
- Search and filtering functionality.
- Booking workflows.
- Booking details and status verification.

Admin Role

- Admin authentication.
- Dashboard functionality.
- Viewing and managing bookings.
- Viewing and managing customer information.
- Available administrative operations.

Agent Role

- Agent authentication.
- Agent dashboard.
- Available agent functionalities.
- Relevant booking or customer management operations, if available.

Supplier Role

- Supplier authentication.
- Supplier dashboard.
- Available supplier functionalities.
- Relevant service or booking management operations, if available.

Cross-Role Testing

- Verify interactions between different roles.
- Validate booking information across Customer and Admin accounts.
- Verify that role-specific actions and permissions behave as expected.

The final scope will be confirmed after the initial exploration phase.

3.2 Out of Scope

The following activities are excluded from this project:

- Automation Testing.
- API Testing.
- Performance and Load Testing.
- Security and Penetration Testing.
- Source Code Testing.
- Testing external third-party services independently.
- Features that are unavailable or inaccessible in the provided demo environment.

Any unavailable functionality will be documented as a testing limitation rather than automatically reported as a defect.

4. Test Deliverables

The testing team will produce the following deliverables:

Deliverable	Description
Test Plan	Document describing the testing approach, scope, objectives, resources, and schedule.
Test Cases	Detailed test cases containing preconditions, steps, test data, and expected results.
Bug Reports	Documentation of identified and reproducible defects.
Test Execution Results	Records of executed test cases and their statuses.
Evidence	Screenshots supporting test execution results and reported defects.
Final Test Summary Report	Summary of testing activities, results, defects, coverage, and limitations.

Documentation and Sharing:

All testing documentation will be maintained in a shared Google Sheets workbook accessible to the project team.

The workbook will contain separate tabs for the four user roles, along with additional tabs for project information, scope, bug reports, and execution summaries where needed.

5. Dependencies

The testing activities depend on the following:

- Availability of the PHPTravels Demo environment.
- Receiving valid Demo Access credentials.
- Availability of the four intended user roles.
- Access to the functionalities included in the agreed testing scope.
- Availability of dummy test data.
- Stable internet connectivity.
- Availability and collaboration of all five team members.

Contingency Plan:

If a role, feature, or external service is unavailable, the team will:

- Document the limitation.
- Mark affected test cases as Blocked or Not Applicable, as appropriate.
- Reassess the testing scope.
- Reallocate testing tasks when necessary.

6. Test Environment

Testing will be conducted using the provided PHPTravels Demo web application.

Environment Component	Details
Application	PHPTravels Demo
Application Type	Web Application
Testing Environment	Online Demo Environment
Testing Method	Manual Testing
Documentation	Google Sheets

Browsers	Google Chrome
Operating Systems	Windows
Test Data	Dummy test accounts and booking information
Internet Connection	Required

Environment Notes:

- The team will use the credentials provided for the demo environment.
- Only dummy data will be used during testing.
- Since the environment is shared, team members must coordinate actions that modify data.
- The team will verify whether the demo environment resets data periodically.

7. Risk Management

The following risks may affect the testing activities:

Risk	Impact	Mitigation Strategy
Delayed Demo Access	Testing schedule may be affected.	Request access as early as possible and adjust the schedule if necessary.
Unavailable User Roles	Some functionalities cannot be tested.	Verify role availability during exploration and reallocate tasks.
Unavailable Features	Planned test scenarios may not be executable.	Update the scope based on actual application functionality.
Shared Environment Conflicts	Team members may interfere with each other's test data.	Coordinate test execution and use distinct dummy data.
Demo Data Reset	Previously created data may disappear.	Keep screenshots and execution records, and recreate test data when needed.
Limited Testing Time	Some test scenarios may remain unexecuted.	Prioritize critical business workflows and high-priority test cases.

Unstable Demo Environment	Execution may be interrupted.	Record blocked cases and retry when the environment becomes available.

8. Test Schedule

The project will be completed within seven days.

Day	Activity	Expected Deliverable
Day 1	Request Demo Access, explore the application, and identify available roles and features.	Exploration Notes and Confirmed Features
Day 2	Finalize the testing scope, identify test scenarios, and assign responsibilities.	Approved Scope and Test Scenarios
Day 3	Design and review detailed test cases.	Reviewed Test Cases
Day 4	Execute positive test scenarios and main business workflows.	Updated Execution Results
Day 5	Execute negative scenarios and additional functional tests.	Updated Execution Results and Bug Reports
Day 6	Retest reported defects where possible and perform regression testing on critical workflows.	Retest and Regression Results
Day 7	Review documentation, analyze results, and prepare the final test summary report.	Final Test Summary Report

The schedule may be adjusted depending on Demo Access availability and the actual application scope.

9. Roles and Responsibilities

The testing team consists of five members.

Role	Responsibilities
QA Team Coordinator – Member 1	Coordinate testing activities, maintain the Test Plan, organize documentation, monitor progress, and review test cases and bug reports.

Customer Testing Owner – Member 2	Explore and test Customer functionalities, prepare test scenarios and test cases, and report defects.
Admin Testing Owner – Member 3	Explore and test Admin functionalities, verify administrative operations, and report defects.
Agent Testing Owner – Member 4	Explore and test Agent functionalities and report defects.
Supplier Testing Owner – Member 5	Explore and test Supplier functionalities and report defects.

Team Collaboration:

- All members will participate in application exploration.
- Team members will review each other's test cases where possible.
- Cross-role workflows will be tested collaboratively.
- Each test case will have one assigned owner.
- Testing progress and identified issues will be shared through the team's Google Sheets workbook.

---

10. Entry and Exit Criteria

Entry Criteria

Testing can begin when:

- Demo Access credentials are received.
- The application is accessible.
- The available user roles are identified.
- Test data is prepared.
- The initial testing scope is agreed upon.
- Test cases are reviewed and ready for execution.

Exit Criteria

The testing phase can be considered complete when:

- All agreed high-priority test cases have been executed or their blockers documented.
- Test execution results are recorded.
- Identified defects are documented.
- Critical workflows have been tested where accessible.
- Retesting and relevant regression testing have been completed where possible.
- The final test summary report is prepared.
- Remaining limitations and unexecuted test cases are clearly documented.

Document Status: Initial Draft – Subject to Update After Application Exploration.

Important Note: The final scope, available functionalities, and test scenarios will be updated after the team receives Demo Access and explores the actual application.
